

PLAN

Define goals and build capacity

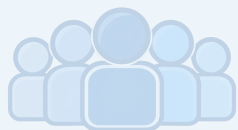

1

Data prioritization

Identify and assess datasets based on value and risk.

2

Team creation

Assemble a team with complementary skills and defined roles.

3

Metadata creation

Recover and document context and metadata.

4

Data transfer & compilation

Collect, organize, and combine data from original sources.

5

Data cleaning & validation

Clean, standardize, and validate data quality.

6

Data archiving

Archive dataset in a long-term data repository.

7

Data sharing

Publish and make data accessible for reuse.

RECONSTRUCT & PREPARE

Recover, organize, and prepare the data

Iterative process

ARCHIVE & SHARE

Make data accessible for the long-term

Ongoing communication with data steward / curator
